

Protect Your Property + Your Bottom Line

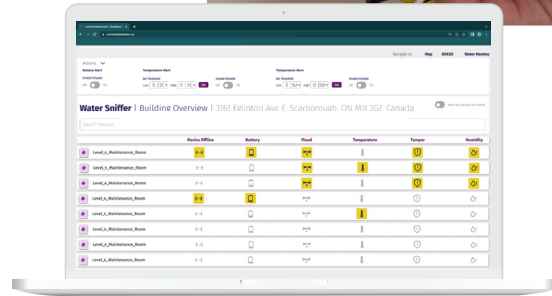

Water accounts for 42% of global insurance claims costs.

Water intrusions in vulnerable areas like mechanical rooms, electrical zones, washrooms, and kitchens can lead to extensive damage, costly repairs and insurance claims and operational downtime. Without precise detection, these hidden flood risks can easily go unnoticed until it's too late.

Meet the Water Sniffer

The Water Sniffer is a cutting-edge flood sensor armed with advanced moisture and temperature detection technology. Strategically placed in high-risk zones, it delivers instant alerts at the very first signs of water, ensuring you can take immediate action to prevent damage.

- ✓ Continuously monitor water, temperature, humidity and pressure levels throughout your building.
- ✓ Get instant notifications and alerts, enabling quick response and preventive actions.

- ✓ Get a comprehensive visual representation of flood areas to pinpoint the exact location of water intrusion.
- ✓ Track and analyze historical flood data to identify patterns, trends, and potential risk areas.
- ✓ Monitor the battery life of the flood detector, ensuring uninterrupted operation and timely replacements.
- ✓ Set customizable thresholds for water levels or other parameters, triggering alerts when exceeded.
